Yontoo.com Gets a New and Improved Facelift

San Diego, CA, January 13, 2011 - The popular software development company, Yontoo LLC just got sleeker and better. The new software website has been completely re-designed for easier navigation and introduces newly added features.

The updated website includes new categories for visitor's to search and navigate through: App Market, Developers, and About Us. The App Market page introduces visitors to all available applications that utilize the Yontoo Layers™ software platform. Visitors can download any of the listed applications on this page as well as find information about each application. From the App Market page, learn more about layer apps, learn how visitors can build a layer app using the Yontoo Layers™ technology, and learn about Yontoo LLC as a company.

Some other new features within the new site design also include: An updated App Settings page and Support page. The App settings page allows users of specific Yontoo Layers™ powered apps to turn individual or all apps from “on” to “off” with the flip of a switch. By turning off these switches, the app itself will be disabled until turned back on from the App Settings Page. The new support page was slightly changed and offers frequently asked questions for users of each of the Yontoo Layers™ powered apps. If none of the questions address the issue at hand, visitors can utilize the supplied support team email form or the contact page email form for further assistance.

The new and improved Yontoo LLC website is now available at www.yontoo.com for visitors and software enthusiasts alike to navigate through with ease. Take control and empower yourself with Yontoo Layers™.

###

About Yontoo LLC:

Yontoo LLC, based in San Diego, Calif., is the creator of Yontoo Layers™, a web enhancement platform that enables internet users to use browser apps that “make improvements” to existing websites. The “layers” technology is a web browser add-on that creates virtual layers within existing websites. These layers can be customized by apps to give the appearance of having actually modified the webpage itself. Because the edits take place on the virtual layer, the original webpage remains intact. The first applications to utilize Yontoo Layers™ include: PageRage, Sanity Switch, Drop Down Deals, and Buzzdock. For more information, visit www.yontoo.com. If you would like more information about this topic or to schedule an interview with a Yontoo Representative, please send us an email at press@yontoo.com or visit www.yontoo.com.
